

Course Title

207MTM – Free-choice Course

Course Description

This course enables students to select a subject from an approved list of elective courses offered by the University. The selected course should contribute to the student's academic, professional, or interdisciplinary development and complement the learning outcomes of the Manufacturing Technology and Management program.

Course Objectives

- To provide flexibility in the study program according to students' interests and career goals.
- To broaden students' knowledge in engineering, management, technology, or related fields.
- To support interdisciplinary learning and personal development.
- To enhance competencies relevant to the student's chosen specialization.

Learning Outcomes

Upon successful completion of the selected course, students will achieve the learning outcomes defined in the syllabus of the chosen course.

Teaching and Learning Methods

Teaching and learning methods are defined according to the syllabus of the selected course.

Assessment

Assessment methods and grading criteria are defined according to the syllabus of the selected course.

Student Workload

5 ECTS (125 hours) according to the workload specified in the syllabus of the selected course.

Literature

Specified in the syllabus of the selected course.
